

Chemical Safety Guide

Approved worker rules and site regulations from the SentinelLoop knowledge base. These instructions support factory safety practice. They do not replace trained emergency responders or a competent person's isolation and repair work.

Immediate worker actions

1. Move away from a chemical spill, leak, strong smell, or visible vapour.
2. Avoid touching the chemical or contaminated surfaces.
3. Warn nearby workers to stay away from the affected area.
4. Do not try to clean or contain the chemical unless you are trained to do so.
5. Avoid spreading contamination to other areas.
6. Report the chemical hazard immediately through the site safety process.
7. Keep the area clear until trained personnel arrive.

Site regulations

1. Chemicals must be labelled, stored in approved containers, and kept in designated stores.
2. Keep acids, oxidisers, flammables, and incompatibles separated as posted on store signs.
3. Safety data information must be available for substances used in the area.
4. Spill kits, eyewash, and emergency showers must remain unobstructed and inspected.
5. Eating, drinking, and storing food in chemical work areas is not permitted.
6. Decanting or mixing chemicals is allowed only for trained staff following the SOP.
7. Waste chemicals must go to labelled waste containers, never to drains or open ground.
8. Ventilation must stay on in storage and process areas while chemicals are in use.
9. Report leaking drums, missing labels, or damaged secondary containment at once.
10. Contractors may handle site chemicals only under the same storage and PPE rules.

Worker duties

1. Wear the chemical PPE required for the task, including gloves, goggles, and apron.
2. If skin or eyes are exposed, use the eyewash or shower and call for medical help.
3. Remove contaminated clothing carefully and do not take it into clean areas.
4. Stay upwind of vapours and leave if you feel dizzy, nauseous, or short of breath.
5. Tell the supervisor which substance was involved if the label is known.

Prohibited actions

1. Do not taste, smell closely, or touch unknown liquids or powders.
2. Do not use bare hands, rags, or unofficial bottles to move chemicals.

3. Do not hose a spill into walkways, drains, or other work bays.
4. Do not neutralize or mix spilled chemicals unless the approved procedure says so.

Always follow instructions from trained safety or emergency personnel.
