

General Workplace Hazards Guide

Approved worker rules and site regulations from the SentinelLoop knowledge base. These instructions support factory safety practice. They do not replace trained emergency responders or a competent person's isolation and repair work.

Immediate worker actions

1. Keep a safe distance from the hazard.
2. Warn nearby workers about the dangerous condition.
3. Stop using unsafe equipment if this can be done safely.
4. Do not enter an area that looks unstable or unsafe.
5. Keep people away from spills, damaged equipment, or blocked paths.
6. Report the hazard immediately through the site safety process.
7. Wait until the area or equipment has been confirmed safe before returning.

Site regulations

1. Every worker has the right and duty to report unsafe conditions without delay.
2. Walkways, emergency routes, and loading bays must remain clear of obstructions.
3. Spills, leaks, and damaged flooring must be marked and reported until cleaned.
4. Defective tools and equipment must be tagged out and not returned to service.
5. Housekeeping is part of safety: waste, offcuts, and pallets must be stacked safely.
6. Visitors must be escorted and must follow the same access and PPE rules.
7. Night and shift handovers must mention open hazards still waiting for control.
8. Photographs and reports used for incidents must not include unnecessary personal data.
9. Do not disable guards, alarms, or safety signs to save time.
10. High-risk work needs a supervisor or permit where the site procedure requires it.

Worker duties

1. Look for slip, trip, fall, heat, noise, and housekeeping hazards at the start of a shift.
2. Use the correct tool for the job and inspect it before use.
3. Keep a safe distance from forklifts, overhead loads, and reversing vehicles.
4. Speak up if a coworker is in immediate danger and call for help if needed.
5. Follow posted speed, access, and exclusion-zone signs.

Prohibited actions

1. Do not invent repair steps or improvise unsafe shortcuts.
2. Do not ignore a hazard because production is busy.

3. Do not remove warning tape, tags, or barriers placed by the safety team.
4. Do not enter confined, unstable, or poorly lit spaces without authorization.

Always follow instructions from trained safety or emergency personnel.
